

# USING THE MODEL OF QUALITY INDICATORS: A PILOT STUDY

**Turkish Biochemical Society Working Group of  
Laboratory Errors and Patients Safety**

## IFCC - Education and Management Division

### Working Group: Laboratory Errors and Patient Safety

In 2008

#### 9.3.8. Laboratory Errors and Patient Safety (WG-LEPS)

- The WG mission is
- to stimulate studies on the topic or errors in laboratory medicine,
- to collect available data on this topic and
- to recommend strategies and procedures to improve patient safety.

## IFCC - Education and Management Division

Working Group: Laboratory Errors and Patient Safety

### 9.3.8. Laboratory Errors and Patient Safety (WG-LEPS)

- The overall aim of the project is to create a common reporting system for clinical laboratories based on standardized data collection, and to define state-of-the-art and Quality Specifications (QSs) for each QI.
- As can serve external quality assurance program

# Current projects

- Improving awareness of laboratory professionals
- Implementing pilot studies
- Implementing projects for error reduction

# Current projects

- Organizing meetings and scientific sessions
- Supporting the publications of papers on the topic of laboratory errors and patient safety

# Quality indicators

- Quality indicators are major tools to quantify the quality of all operational processes by comparing it against a defined criterion (Plebani et al. 2014)
- Quality indicators improve the quality of patient care.
- The identification of reliable QIs is a key step to quantify the quality of laboratory services.

# Quality indicators

- Patient-centered to promote total quality and patient safety;
- All stages of the TTP, from initial pre-pre-analytical steps (test request and patient/sample identification) to post-post-analytical steps
- Consistent with the requirements of the ISO 15189

# The measurement and monitoring of QIs in laboratory medicine

- Document the quality of the service provided
- Improve performance and patient safety
- Make comparison to benchmark over time between laboratories
- Support accountability, quality improvement and accreditation.

# Pilot study

- A working group established in the Turkish Biochemical Society, 2017
- In Turkey, two laboratories have started to submit their QI data since 2017.
- Istanbul Bağcılar Training and Research Hospital Central Laboratory is one of them.
- The laboratory reports more than 10 million tests per year

# MODEL OF QUALITY INDICATORS (MQI)

International Federation of Clinical Chemistry and Laboratory Medicine  
Working Group "Laboratory Errors and Patient Safety"

## MODEL OF QUALITY INDICATORS

The Model of Quality Indicators has been updated on the basis of the recent Consensus Conference "Harmonization of Quality Indicators in Laboratory Medicine: Two years later" held in Paternò in the October 2014, and a priority score was designed to highlight the value of the individual QI for monitoring not only the quality of the service and possible effects on patient safety, but also the feasibility of data collection under of priority: 1 = mandatory; 2 = important; 3 = important; 4 = value.

KEY PROCESSES QUALITY INDICATORS - PRIORITY 1					
Quality Indicator	Code	Reporting System	Data Collection	Time	Explanatory Note
<b>PRE-ANALYTICAL</b>					
Misidentification errors	Pre-MiR	Percentage of Number of misidentified requests / Total number of requests	a) count misidentified requests b) count total number of requests c) calculate percentage	Data collection: Every day Input data: Monthly	
	Pre-MiS	Percentage of Number of misidentified samples / Total number of samples	a) count misidentified samples b) count total number of samples c) calculate percentage	Data collection: Every day Input data: Monthly	
Test execution errors	Pre-LabTDC	Percentage of Number of requests with erroneous data entered by laboratory personnel / Total number of requests entered by laboratory personnel	a) count the requests with erroneous data entered by laboratory personnel b) count total number of requests entered by laboratory personnel c) calculate percentage	Data collection: Every day or a week per month Input data: Monthly	Laboratory personnel = personnel that are under the laboratory control
	Pre-OffTDC	Percentage of Number of requests with erroneous data entered by off-site personnel / Total number of requests entered by off-site personnel	a) count the requests with erroneous data entered by off-site personnel b) count total number of requests entered by off-site personnel c) calculate percentage	Data collection: Every day Input data: Monthly	Off-site personnel = personnel that are not under the laboratory control
Incorrect sample type	Pre-SiCty	Percentage of Number of samples of wrong or inappropriate sample types (e.g. whole blood instead of plasma) / Total number of samples	a) count samples of wrong or inappropriate type (e.g. whole blood instead of plasma) b) count total number of samples c) calculate percentage	Data collection: Every day Input data: Monthly	
	Pre-SiCco	Percentage of Number of samples collected in wrong container / Total number of samples	a) count samples collected in wrong container b) count total number of samples c) calculate percentage	Data collection: Every day Input data: Monthly	

IFCC WG-LEPS: MQI-KP: Revision 1 – January 2017

Page 1 & 10

Incorrect fill level	Pre-InV	Percentage of Number of samples with insufficient sample volume / Total number of samples	a) count samples with insufficient sample volume b) count total number of samples c) calculate percentage	Data collection: Every day Input data: Monthly	Insufficient = when the sample volume is less than that required independently of the possibility to perform the test. It has to be possible the incorrect collection (volume collected less than defined), independently of collected volume (75% to 10% to 90%) Samples of pediatric patients have to be excluded
	Pre-SaAt	Percentage of Number of samples with inappropriate sample-anticoagulant volume ratio / Total number of samples	a) count samples with inappropriate sample-anticoagulant volume ratio b) count total number of samples with anticoagulant c) calculate percentage	Data collection: Every day Input data: Monthly	
Unsuitable samples for transportation and storage	Pre-SaRe	Percentage of Number of samples not received / Total number of samples	a) count samples not received b) count total number of samples c) calculate percentage	Data collection: Every day Input data: Monthly	
	Pre-SaSt	Percentage of Number of samples not properly stored before analysis / Total number of samples	a) count samples not properly stored before analysis b) count total number of samples c) calculate percentage	Data collection: Every day Input data: Monthly	
Pre-DnaS	Pre-DnaS	Percentage of Number of samples damaged during transportation / Total number of transported samples	a) count samples damaged during transportation b) count total number of transported samples c) calculate percentage	Data collection: Every day Input data: Monthly	
	Pre-InTem	Percentage of Number of samples transported at inappropriate temperature / Total number of samples	a) count samples transported at inappropriate temperature b) count total number of transported samples c) calculate percentage	Data collection: Every day Input data: Monthly	This QI has to be collected if the transportation temperature is monitored
Pre-ExTim	Pre-ExTim	Percentage of Number of samples with excessive transportation	a) count samples with excessive transportation	Data collection: Every day	This QI has to be collected if the transportation time is monitored

IFCC WG-LEPS: MQI-KP: Revision 1 – January 2017

Page 2 & 10

Contaminated samples	Pre-MiCcon	Percentage of Number of microbiological contaminated samples rejected / Total number of microbiological samples	a) count microbiological contaminated samples rejected b) count total number of microbiological samples c) calculate percentage	Data collection: Every day Input data: Monthly	Microbiological samples: blood culture, urine, sputum, pleurocyte, etc.
	Pre-CouT	Percentage of Number of contaminated samples rejected / Total number of not microbiological samples	a) count contaminated samples rejected b) count total number of not microbiological samples c) calculate percentage	Data collection: Every day Input data: Monthly	Contaminated samples = samples which are contaminated by microbes, drugs, anticoagulants, EDTA, citrate, potassium oxalate, 3-4-AT contact material, etc.
Hemolyzed sample	Pre-HemV	Percentage of Number of samples with free hemoglobin (Hb) > 0.5 g/L, detected by visual inspection / Total number of checked samples for hemolysis	a) count samples with free Hb > 0.5 g/L, detected by visual inspection b) count total number of checked samples for hemolysis c) calculate percentage	Data collection: Every day Input data: Monthly	Checked samples = all samples verified for hemolysis have to be included (class of chemistry, immunochemistry, coagulation, etc.)
	Pre-HemD	Percentage of Number of samples with free hemoglobin (Hb) > 0.5 g/L, detected by automated reader / Total number of checked samples for hemolysis	a) count samples with free Hb > 0.5 g/L, detected by automated reader b) count total number of checked samples for hemolysis c) calculate percentage	Data collection: Every day Input data: Monthly	Checked samples = all samples verified for hemolysis have to be included (class of chemistry, immunochemistry, coagulation, etc.)
Clotted samples	Pre-HemK	Percentage of Number of samples rejected due to hemolysis / Total number of checked samples for hemolysis	a) count samples rejected due to hemolysis b) count total number of checked samples for hemolysis c) calculate percentage	Data collection: Every day Input data: Monthly	Checked samples = all samples verified for hemolysis have to be included (class of chemistry, immunochemistry, coagulation, etc.)
	Pre-Clot	Percentage of Number of samples clotted / Total number of samples with an anticoagulant checked	a) count samples clotted b) count total number of samples with an	Data collection: Every day	Checked samples = all samples verified for clotting

IFCC WG-LEPS: MQI-KP: Revision 1 – January 2017

Page 3 & 10

Quality Indicator	Code	Reporting System	Data Collection	Time	Explanatory Note
<b>PRE-ANALYTICAL</b>					
Test accuracy in IQC	Inta-IQC	Percentage of Number of tests without IQC / Total number of tests in the month	a) count number of tests without IQC b) count total number of tests in the month c) calculate percentage	Data collection: Every day Input data: Monthly	IQC: Internal Quality Control
	Inta-IQCc	Percentage of Number of IQC results outside defined limits / Total number of IQC results	a) count number of IQC results outside defined limits b) count total number of IQC results c) calculate percentage	Data collection: Every day Input data: Monthly	IQC: Internal Quality Control
Test accuracy in an EQA-PT control	Inta-EQA	Percentage of Number of tests without EQA-PT control / Total number of tests in the month	a) count number of tests without EQA-PT control b) count total number of tests in the laboratory c) calculate percentage	Data collection: Every day Input data: Monthly	EQA: External Quality Assessment; PT: Proficiency Testing
	Inta-EQA	Percentage of Number of unacceptable performance in EQA-PT schemes, per year / Total number of performance in EQA Schemes, per year	a) count number of unacceptable performance in EQA Schemes b) count total number of performance in EQA Schemes, per year c) calculate percentage	Data collection: Every day Input data: Monthly	EQA: External Quality Assessment; PT: Proficiency Testing
Data management errors	Inta-EnTim	Percentage of Number of incorrect results for erroneous manual transcription / Total number of results that used manual transcription	a) count incorrect results for erroneous manual transcription b) count total number of results that used manual transcription c) calculate percentage	Data collection: Every day Input data: Monthly	
	Inta-EnTIS	Percentage of Number of incorrect results for information system problems / Total number of results	a) count incorrect results for information system problems b) count total number of results c) calculate percentage	Data collection: Every day Input data: Monthly	
<b>POST-ANALYTICAL</b>					
Inappropriate turnaround time	Post-OrTme	Percentage of Number of reports delivered outside specified time / Total number of reports	a) count reports delivered outside specified time b) count total number of reports c) calculate percentage	Data collection: Every day Input data: Monthly	Specified time = the common report (not result)
	Post-OrTAT	Percentage of Number of reports delivered outside specified time (turnaround time) / Total number of reports	a) count reports delivered outside specified time (turnaround time) b) count total number of reports c) calculate percentage	Data collection: Every day Input data: Monthly	Turnaround time = time from report (not result) to communication

IFCC WG-LEPS: MQI-KP: Revision 1 – January 2017

Page 4 & 10

Post-INTAT	Post-INTAT	Turnaround time (minutes), from sample reception in laboratory to release of result, of International Normalized Ratio (INR) value at 95 <sup>th</sup> percentile (STAT)	a) estimate all TAT (minutes), from sample reception in laboratory to release of result, of International Normalized Ratio (INR) value at 95 <sup>th</sup> percentile (STAT) b) estimate the 95 <sup>th</sup> percentile	Data collection: Every day per a month, three months per year Input data: April - August - December	
	Post-WBCAT	Turnaround time (minutes), from sample reception in laboratory to release of result, of White Blood Cell (WBC) count at 90 <sup>th</sup> percentile (STAT)	a) estimate all TAT (minutes), from sample reception in laboratory to release of result, of White Blood Cell (WBC) count at 90 <sup>th</sup> percentile (STAT) b) estimate the 90 <sup>th</sup> percentile	Data collection: Every day per a month, three months per year Input data: April - August - December	
Post-TATAT	Post-TATAT	Turnaround time (minutes), from sample reception in laboratory to release of result, of Cardiac Troponin (TnI or TnT) at 90 <sup>th</sup> percentile (STAT)	a) estimate all TAT (minutes), from sample reception in laboratory to release of result, of Cardiac Troponin (TnI or TnT) at 90 <sup>th</sup> percentile (STAT) b) estimate the 90 <sup>th</sup> percentile	Data collection: Every day per a month, three months per year Input data: April - August - December	
	Post-TATPHI	Percentage of Number of Potassium results (STAT) released after 1 hour / Total number of Potassium results (STAT)	a) count number of Potassium results (STAT) released after 1 hour b) count total number of Potassium results (STAT) c) calculate percentage	Data collection: Every day Input data: Monthly	
Relevant laboratory reports	Post-ResRep	Percentage of Number of recalled reports by laboratory after the release / Total number of released reports	a) count number of recalled reports by laboratory after the release b) count total number of released reports c) calculate percentage	Data collection: Every day Input data: Monthly	For example Reports could be recalled for erroneous results or inappropriate unusual interpretation comments or wrong patient's details, etc.
	Post-InsCR	Percentage of Number of critical results of inside patients notified after a commercially agreed time (from result validation to result communication to the clinical result) / Total number of critical results of inside patients to communicate	a) count critical results of inside patients notified after a commercially agreed time (from result validation to result communication to the clinical result) b) count total number of critical results of inside patients to communicate c) calculate percentage	Data collection: Every day per a month, three months per year Input data: April - August - December	Critical results = results that are so "extremely" abnormal and are considered life threatening because they may be associated with a significant diagnosis event unless a medical action is promptly established by laboratory as which the outside patients have to be effectively reported to the clinical result

IFCC WG-LEPS: MQI-KP: Revision 1 – January 2017

Page 5 & 10

KEY PROCESSES QUALITY INDICATORS - PRIORITY 4					
Quality Indicator	Code	Reporting System	Data Collection	Time	Explanatory Note
<b>PRE-ANALYTICAL</b>					
Inappropriate test requests	Pre-OffPa	Percentage of Number of inappropriate requests, with respect to clinical question (outside patients) / Number of requests reporting clinical question (outside patients)	a) select and count off-site patients requests with respect to clinical question (outside patients) b) count the selected requests with inappropriate tests in relation to clinical question and on the basis of guidelines and scientific recommendations c) calculate percentage	Data collection: A week per month, three months per year Input data: April - August - December	Off-site patients = not hospitalized patients
	Pre-InsPa	Percentage of Number of inappropriate requests, with respect to clinical question (inside patients) / Number of requests reporting clinical question (inside patients)	a) select and count inside patients requests with respect to clinical question (inside patients) b) count the selected requests with inappropriate tests in relation to clinical question and on the basis of guidelines and scientific recommendations c) calculate percentage	Data collection: A week per month, three months per year Input data: April - August - December	Inside patients = hospitalized patients
<b>POST-ANALYTICAL</b>					
Notification of critical results (TAT)	Post-InsCRT	Median value of time (from result validation to result communication to the clinical result) to communicate critical results of inside patients (minutes)	a) estimate the time (minutes) to communicate critical results of inside patients b) calculate the median value of estimated times	Data collection: Every day for a month, three months per year Input data: April - August - December	Critical results = results that are so "extremely" abnormal and are considered life threatening because they may be associated with a significant diagnosis event unless a medical action is promptly established by laboratory as which the outside patients have to be effectively reported to the clinical result
	Post-OffCRT	Median value of time (from result validation to result communication to the general practitioner) to communicate critical results of outside patients (minutes)	a) estimate the time (minutes) to communicate critical results of outside patients b) calculate the median value of estimated times	Data collection: Every day for a month, three months per year Input data: April - August - December	Critical results = results that are so "extremely" abnormal and are considered life threatening because they may be associated with a significant diagnosis event unless a medical action is promptly established by laboratory as which the outside patients have to be effectively reported to the clinical result

- MQI project does not force laboratories to use all QIs proposed.
- It seems suitable to include in the MQI all the indicators thought to be able to be useful in monitoring critical activities
- The individual laboratory should be able to decide how many, and which, QIs are to be adopted.

- We have decided to use quality indicators that are suitable for the type of data which can be obtained from the laboratory information system.

**Pre-WroCo**

- **Percentage of: Number of samples collected in wrong container/Total number of samples.**

**Pre-InsV**

- **Percentage of: Number of samples with insufficient sample volume/ Total number of samples.**

**Pre-HemR**

- **Percentage of: Number of samples rejected due to haemolysis/ Total number of checked samples for haemolysis**

**Pre-Clot**

- **Percentage of: Number of samples clotted/ Total number of samples with an anticoagulant checked for clots.**

**Post-PotTAT**

- Turnaround time (minutes), from sample reception in laboratory to release of result, of Potassium (K) at 90th percentile (STAT).

**Post-INRTAT**

- Turnaround time (minutes), from sample reception in laboratory to release of result, of International Normalized Ratio (INR) value at 90th percentile (STAT).

**Post-WBCTAT**

- Turnaround time (minutes), from sample reception in laboratory to release of result, of White Blood Cell (WBC) count at 90th percentile (STAT).

**Post-TnTAT**

- Turnaround time (minutes), from sample reception in laboratory to release of result, of Cardiac Troponin (TnI or TnT) at 90th percentile (STAT).

**Post-TATPotH**

- Percentage of: Number of Potassium results (STAT) released after 1 hour / Total number of Potassium results (STAT)

# PARTICIPITANTS REPORTS

## QUALITY INDICATORS

Post-TATPoHPercentage of: Number of Potassium results (STAT) released after 1 hour / Total number of Potassium results (STAT)

# PARTICIPITANTS REPORTS

## QUALITY INDICATORS

Post-TATPotHPercentage of: Number of Potassium results (STAT) released after 1 hour / Total number of Potassium results (STAT)

# Conclusion

- There are too many quality indicators.
- One of the biggest challenges is the difficulty in understanding some indicators.
- Quality indicators should be translated to all languages and there should be more detailed explanation and calculation methods.

# Conclusion

- Due to difficulties in obtaining data from laboratory information system, a common middleware is needed.
- MQI covers all total testing processes.

**THANK YOU FOR YOUR PATIENCE**
